

Do travellers really want lounge access?

*Scapia gave travellers more airport choices.
Did it accidentally create a new decision problem?*

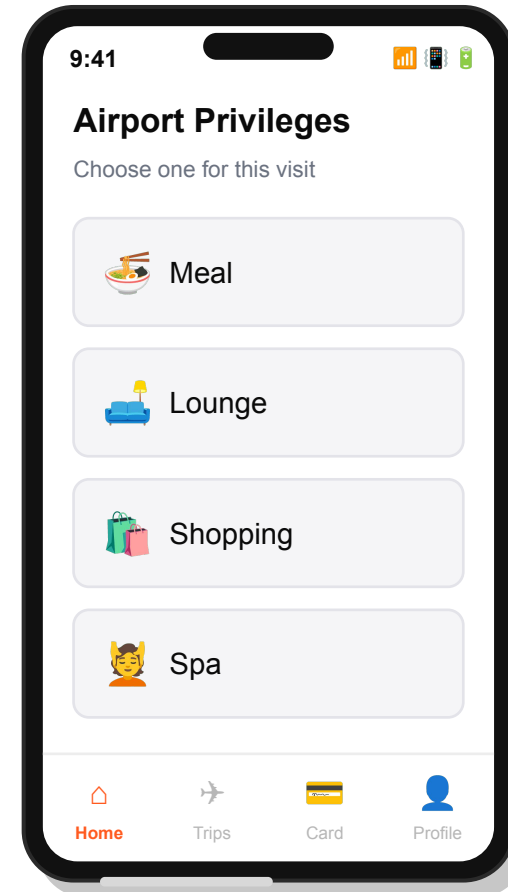

THE PRODUCT QUESTION

If the airport is the product, how do we help travellers choose the best way to spend their time there?

One privilege per airport visit. The user has to pick, unaided.

THE SHIFT

“Get lounge access” → **“Choose what you want at the airport.”**

TODAY'S SCREEN

Every option looks equally weighted — no guidance on which to pick.

THE INSIGHT

The airport isn't one use case. It's a context.

Same four privileges. Four different travellers need four different things.

TRAVELLER 1

45 min before flight

Hungry

Meal

TRAVELLER 2

2.5 hrs before flight

Wants to work

Lounge

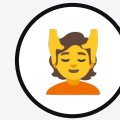

TRAVELLER 3

90 min · with family

Kids restless

Shopping

TRAVELLER 4

Long layover

Exhausted

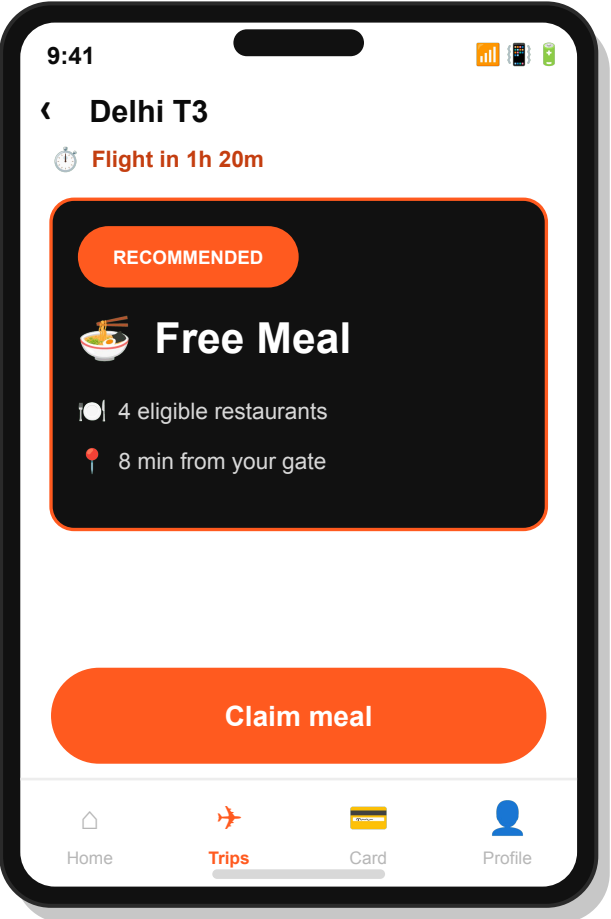

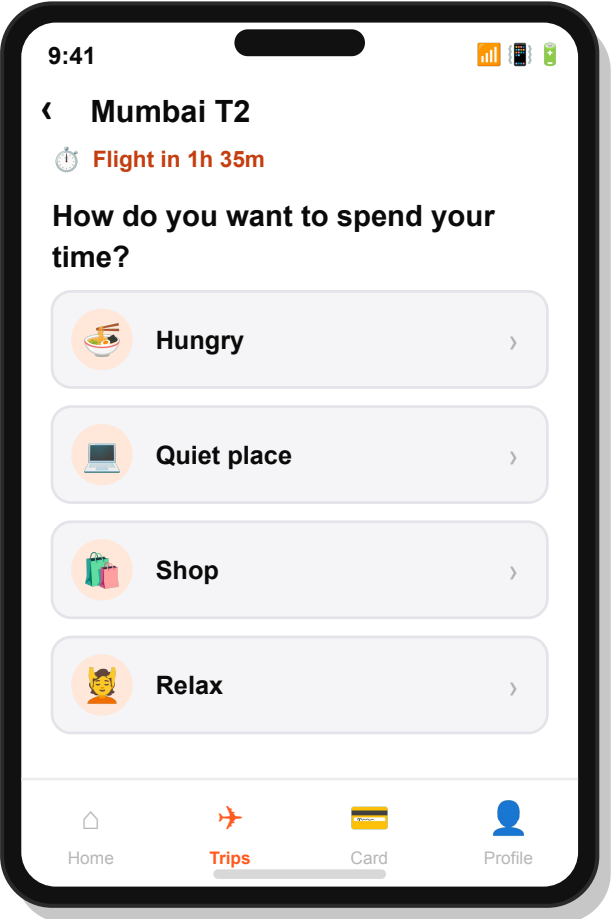

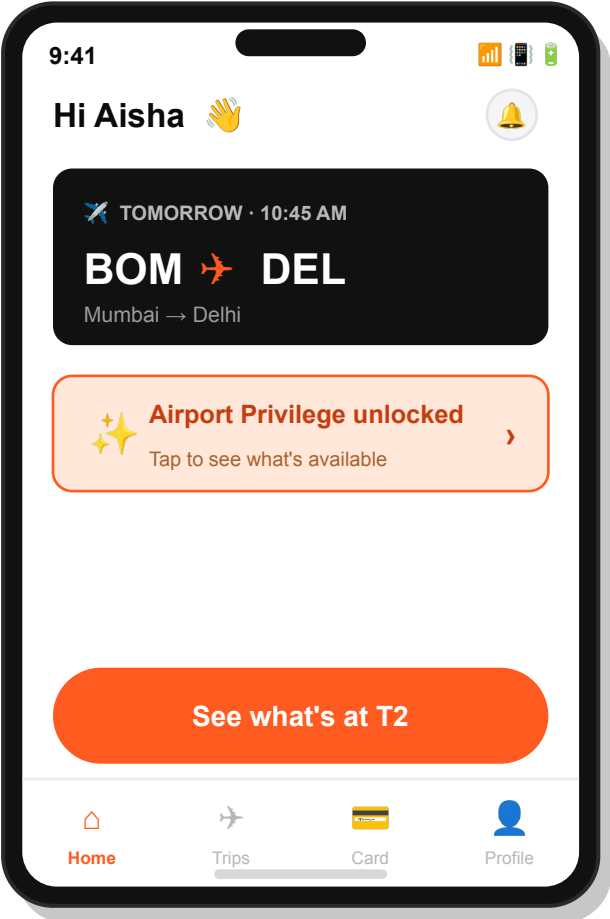

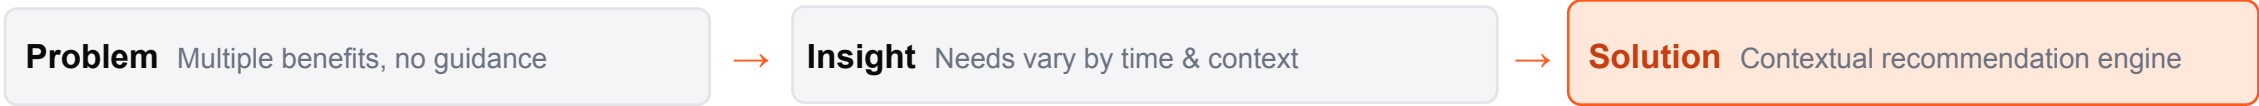

Spa

The right benefit depends on **time, terminal, flight, traveller and intent** — not a static menu.

THE PRODUCT

From Airport Benefits → Airport Concierge

Does context beat choice?

HYPOTHESIS

Contextual recommendations increase Airport Privilege activation rate, compared to today's undifferentiated choice screen.

METRICS TO TRACK

Airport Privilege activation rate

Time from arrival → activation

Benefit utilization

Repeat airport usage

Card spend after travel

NPS / satisfaction

★ **NORTH STAR METRIC**

% of eligible airport visits where a traveller successfully uses the most relevant privilege.
